

MATHEMATICS FOR ECONOMISTS
ECON 897. Lecture Notes. Part I

Gabriel Basaluzzo
Department of Economics
University of Pennsylvania

Summer 2002

1	Logic and Proof	7
1.1	Logical statements	7
1.2	Logical Connectives	8
1.3	Quantifiers	12
1.4	Techniques of Proof	15
1.5	References	18
2	Elementary Set Theory	19
2.1	Introduction	19
2.1.1	Description of a Set	19
2.2	Operation on sets	21
2.2.1	Union and Intersection	21
2.2.2	Relative Difference	23
2.3	Relations	23
2.3.1	Ordered pairs	23
2.3.2	Cartesian Product	24
2.3.3	Properties	24
2.3.4	Binary Relations	25
2.3.5	Equivalence relations	26
2.3.6	Partition	26
2.3.7	Order relations	27
2.4	The Set of Natural Numbers. Induction	28
2.4.1	The Well Ordering Property and the Principle of Mathematical Induction	30
2.4.2	Applications	31
2.5	Appendix: Binomial Coefficients	32
2.6	References	34
3	The Real Numbers	35
3.1	Fields	35
3.2	The completeness axiom (least-upper-bound property) and the real field \mathbb{R}	36

3.2.1	Upper bounds and Suprema	37
3.2.2	The Completeness axiom	38
3.2.3	The set of real numbers	38
3.2.4	The Archimedean Property	40
3.3	The extended real number system	42
3.4	The absolute value	43
3.5	The Complex Field C	44
3.6	References	45
4	Functions	47
4.1	Functions	47
4.1.1	Properties of Functions	48
4.1.2	Functions acting on sets	49
4.1.3	Composition of Functions	49
4.1.4	Inverse Functions	50
4.2	Cardinality	53
4.2.1	Countable Sets	54
4.3	References	60
5	Basic Topology	61
5.1	Topology of the Reals	61
5.1.1	Metric spaces and Neighborhoods	61
5.1.2	Open and closed sets in \mathbb{R}	63
5.1.3	Accumulation Points	65
5.2	Compact sets in \mathbb{R}	67
5.3	Convexity and Connectedness	72
5.4	References	73
6	Sequences	75
6.1	Sequences	75
6.2	Convergence	75
6.2.1	Convergent sequences	75
6.2.2	Properties of Convergent Sequences	78
6.2.3	Convergence and topological properties of sets	79
6.3	Limit and comparison theorems	80
6.3.1	Infinite Limits	81
6.4	Monotone sequences and Cauchy sequences	82
6.4.1	Monotone Sequences	82
6.4.2	Cauchy sequences	83
6.5	Subsequences	84
6.5.1	Limit Superior and Limit Inferior	86
6.5.2	Some special sequences	88
6.6	References	88

7	Infinite Series	89
7.1	Convergence of Infinite Series	89
7.2	Convergence Tests	91
7.2.1	Absolute Convergence	93
7.2.2	The ratio and root tests	95
7.2.3	Alternating series test	97
7.2.4	Power series	99
7.3	References	101
8	Limits and Continuity	103
8.1	Limits of Functions	103
8.1.1	One sided Limits	104
8.1.2	Infinite limits and limits at infinity	105
8.1.3	Sequential Criterion for Limits	106
8.1.4	Indeterminate limits	108
8.2	Continuity	109
8.2.1	Continuous functions	109
8.2.2	Basic properties of continuous functions.	112
8.2.3	Continuity and compactness	113
8.2.4	Uniform continuity	115
8.2.5	Monotonic functions	117
8.2.6	Continuous and invertible functions	119
8.3	References	120
9	Differentiation	121
9.1	The Derivative of a Real Function	121
9.2	Basic Properties	124
9.3	Mean value theorems	127
9.4	L'Hospital's rule	130
9.5	Linear approximation. Taylor's theorem	131
9.6	Optimization in \mathbb{R}	133
9.6.1	Local extrema	133
9.6.2	Concave and convex functions	135
9.6.3	Global extrema	139
9.7	Appendix	140
